

Dott. EZIO COSTA
and
Dott. ALESSIO REDAELLI
present:

The DVD presents the most recent and innovative materials based on hyaluronic acid, collagen, and agarose at different concentrations. They are all reabsorbable and safer materials.

The methods of use, the depth, the spots of injections and the techniques will be illustrated. For the practical section, this volume gives the possibility to evaluate the anamnesis, facial analysis and the plan of treatment on four models. For each one of them, an accurate demonstration of every therapeutic phase will be shown with images and videos. Our goal is to give an easy consultative support.
