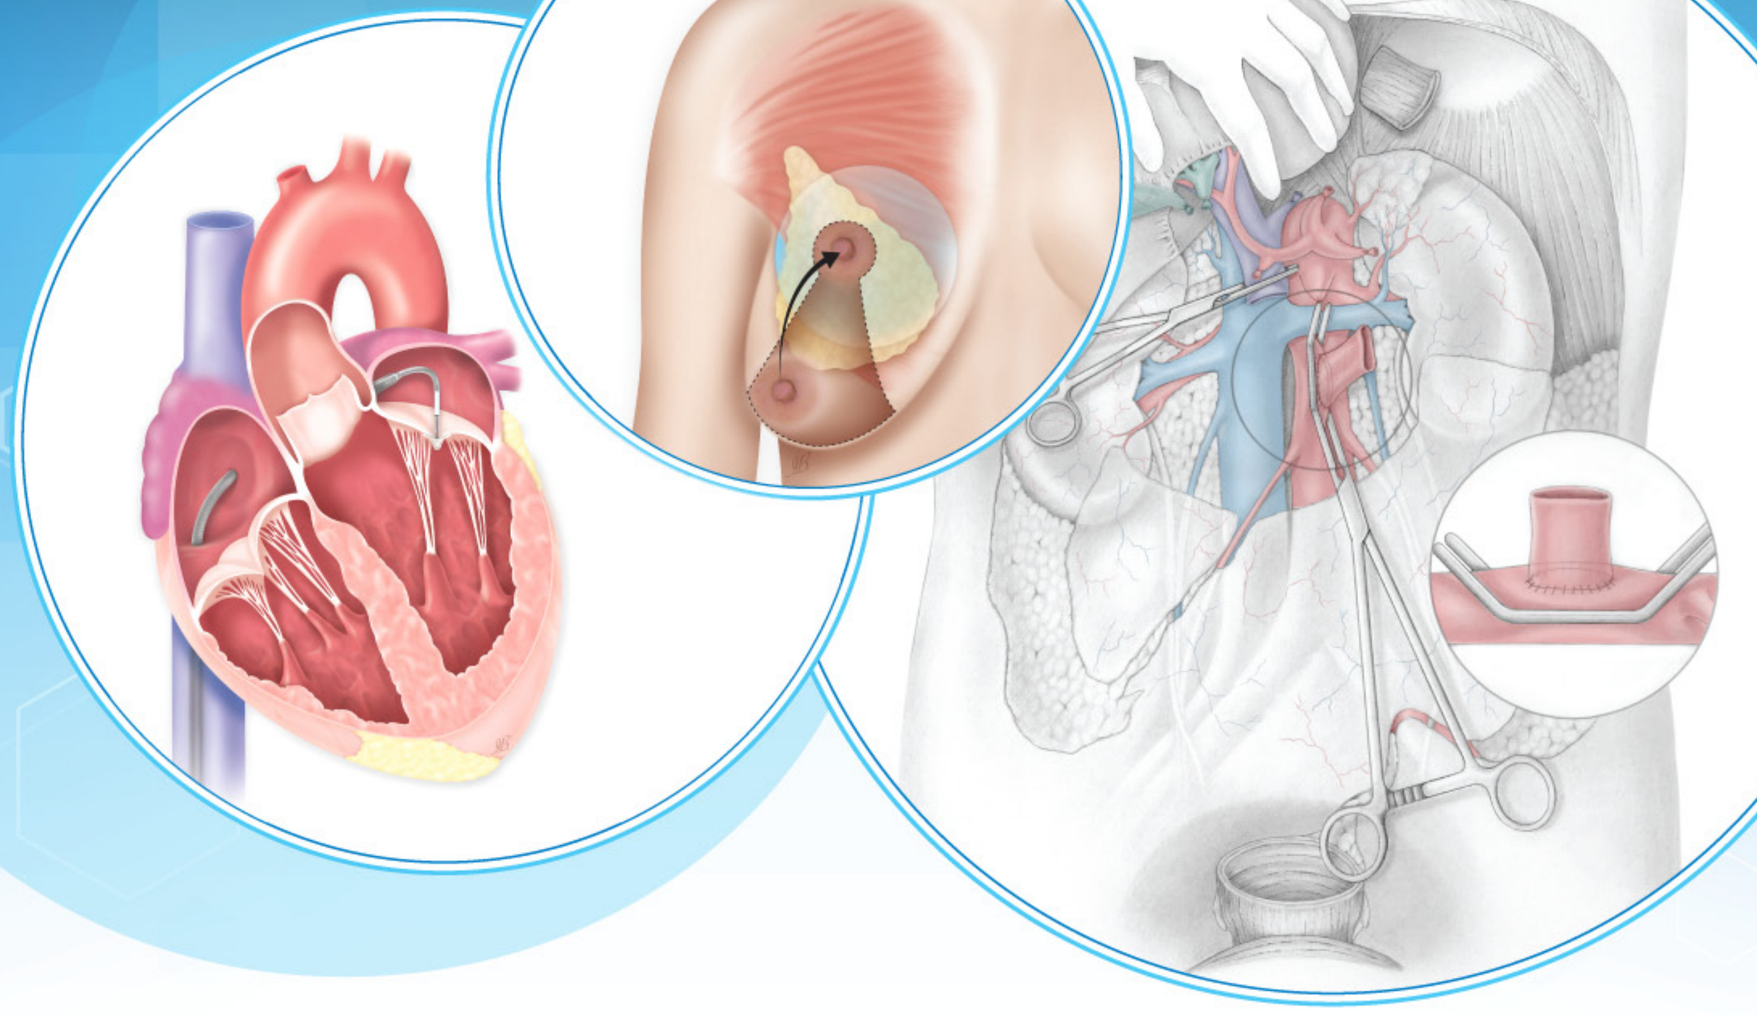
ILLUSTRAZIONI *anatomiche*



In medical and scientific field is critical
that anatomical parts are depicted
in a clear and explanatory!

My name is Ilaria Bondi and I am an anatomical illustrator,
I have been dealing with medical-scientific drawings. I obtained the
University Diploma in Anatomical Design at the Faculty of Medicine
and Surgery of the University of Bologna in 1999.

Using the innovative graphic techniques, combined
with the tradition of anatomical design,
I realize illustrations and graphic components
INDISPENSABLE to complete and / or enrich
medical-scientific publications.

THANK TO MY PREPARATION AND LONG EXPERIENCE IN THE MEDICAL INDUSTRY I CREATE

Anatomical Drawings

Illustrations
of anatomy and
pathological anatomy.

Drawings of Surgical Technique

Explanatory illustrations
of the techniques in the
various fields of surgery.

Scientific Communication

Realization of didactic
material for bio-medical
communication.

It is a unknown but EXTREMELY useful profession to all those doctors
who need clearer and more explicit illustrations than normal photography
in their medical-scientific publications.
